REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

One independent claim is presented. The claim has limitation that states an engine having an acceleration decision means making decision as to accelerating state of said motor vehicle on the basis of said engine operation state; air-fuel ratio control means for arithmetically determining a fuel injection quantity on the basis of said engine operation state to thereby drive said fuel injector while controlling said air-fuel ratio to a desired value thereof through a feedback control on the basis of said detection signal of said air-fuel ratio sensor; purge control means for driving said purge control valve on the basis of said engine operation state; and fuel correction arithmetic means for arithmetically determining a purge air concentration correcting coefficient for correcting said fuel injection quantity on the basis of the control quantity for said purge control valve validated by said purge control means and said engine operation state, wherein said fuel correction arithmetic means is so designed as to reset said coefficient to an initial purge air concentration correcting value when said purge air concentration correcting coefficient becomes smaller than a predetermined value inclusive thereof, indicating leanness of said air-fuel mixture and when it determined that said motor vehicle in the accelerating state. Such a control system was not found or suggested in the prior art. All claims depend from claim 1 and therefore are allowable for at least the reason above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
